nintexsign | POWERED BY Adobe Sign

Expedite document approvals with signature-based workflows. Put the power of e-sign to work today

Nintex Sign leverages the same e-signing and platform benefits as those from Adobe Sign. Nintex partnered with Adobe Sign for its superior and secure e-signing experience and enterprise-grade solution. Here are five reasons to choose Nintex Sign over DocuSign:

1. Simplest signing experience and superior partnerships

Strong partnership with Microsoft – Nintex is Microsoft's #1 co-sell partner and Adobe Sign is Microsoft's preferred e-sign solution

30% faster than DocuSign and an easier, more intuitive signing experience

Unsurpassed enterprise branding and customization, which does not include in-product marketing like DocuSign

Automate end-to-end processes that go beyond signing and approvals with advanced workflows

Drag-and-drop functionality allowing both IT and business users to create signature-based workflows with ease

More secured digital signature included to provide customers that require the additional compliance in their signature approval, unlike DocuSign which requires a separate license

2. Unparalleled Integrations between Nintex Sign and Nintex Workflow

Create Nintex Sign signature-based workflow to trigger automation before, during, and/or after a signature event

Reduce time to signature by 95%, with e-signing on any device

Reduce legal and business risk and improve compliance with automated, end-to-end signature workflows

Automate your document processes and gain visibility of document status at all stages

Experience the freedom of sending quotes for signature and tracking progress from anywhere, on any mobile device

Take the hassle out of signing with e-signing from any device in a few clicks

Activate other business applications and systems in your organization after a signature event with advanced workflow

Archive your signed documents to multiple end points; both you and sign will retain copies of everything signed

3. Nintex partnered with Adobe Sign because it is a trusted, proven solution

Adobe is one of the most trusted SaaS providers with 6+ billion signature transactions annually

Adobe invented PDF and has a history of creating and supporting globally adopted open standards

It is a profitable, stable $100+ billion company with R&D budget of $976M and over 1,000 patents in digital documents

Most importantly, Adobe's goal of 99.99% uptime means you can create, run, and maintain your signature-based workflows with minimal disruption, increasing end-customer satisfaction

4. Globally legal and secure

Nintex partnered with Adobe because security is Adobe's top priority

Adobe Document Cloud is compliant with ISO 72001:2-13, PCI DSS and SOC 2 Type 2, GDPR, and eIDAS

Adobe also meets many additional industry-specific compliance requirements such as Safe-Bio Pharma, HIPAA, FERMA, GLBA, FedRAMP, and FDA 21 CFR Part 11

Custom storage and retention to satisfy your policies and compliance regulations

5. Best-in-class enterprise service and support

Global enterprise service and support with transparent pricing that includes enterprise onboarding and customer success resources

Extensive training materials and learning modules covering the facets of the Nintex Platform

A robust Nintex community with over 19,000 members sharing best practices, technical content and solutions

Worldwide infrastructure and global presence, with 34 fully localized versions of Nintex Sign for senders and signers

The future of process. Here today.
